2 DESCRIPTION

STA508 is a monolithic quad half bridge stage in Multipower BCD Technology. The device can be used as dual bridge or reconfigured, by connecting CONFIG pin to V_{dd} pin, as single bridge with double current capability, and as half bridge (Binary mode) with half current capability.

The device is particularly designed to make the output stage of a stereo All-Digital High Efficiency (DDX™) amplifier capable to deliver 80 + 80W @ THD = 10% at V_{CC} 35V output power on 8Ω load.

In single BTL configuration is also capable to deliver a peak of 160W @THD = 10% at V_{CC} = 35V on 4Ω load (t ≤ 1sec). The input pins have threshold proportional to I_{bias} pin voltage.
